Temporary barricades are classified by the number of orange and white reflective boards on each side, not by the total number of boards. Temporary barricades are available in wood/steel, plastic/steel and all plastic construction.

## Tech notes:

- Type I barricades have one orange/white reflective board on each side, and are typically 2ft wide.
- Type II barricades have two orange/white reflective boards on each side, and are typically 2ft wide.
- Type III barricades have three orange/white reflective boards on one side, and are typically 4ft wide.
- Other barricade sizes, colors and styles are available by special order.
- Empco barricade lights can be added to most barricades for increased night time visibility.
