**Surface mount and drive-in delineators are stocked in several sizes and colors, as well as surface mounted crosswalk signs and CA Type K center island markers. .**

## Tech notes:

- New Direction surface mount delineators are available in 36" and 48" heights, are a good value and offer the option of installation by adhesive or by mechanical fasteners.
- In our opinion, Impact Recovery is the best choice for crosswalk signs. We have found they are more durable than other brands.
- Flat top and drive-in delineators are usually used to channelize traffic. To meet state and federal standards, white or yellow vertical tape is added to one or both sides, depending on the application.
- Fully round delineators usually have multiple horizontal bands of reflective tape for 360 degree visibility.
- Drive in delineators are available in colors other than white by special order.
