service in-house sign shop with
cut vinyl and print graphic
capabilities and a extensive stock
of aluminum sign blanks and
other substrates.**

Tech notes:

- Unless you need a sign that's only to be used for a short period of time, be wary of the offerings of many discount internet sign companies. Their cheap price is made possible by the use of cheap digital print inks which very quickly fade. We make a lot of replacement signs for their disappointed customers.
- Cut vinyl graphics made with top quality materials in standard FHWA traffic colors, generally make for the longest lasting signs, and many will last ten years or more.
- Print graphics using long lasting solvent based inks are a great option where complex images, small lettering or non FHWA colors are required. Print signs can be covered with over laminate for scratch, UV and some graffiti resistance.
- Any sign can be covered with 3M 1160 anti-graffiti film for additional UV and superior graffiti protection at an additional charge.
