Look no further than Traffic Supply, Inc. for all of the little necessities for your next construction, paving or striping project.

Tech notes:

- ID Locators or "witch hats" are used to mark manhole and valve covers during overlay projects.
- Railroad spikes are used to secure steel trench plates.
- Sized for parking structures and other low speed areas, 26" outdoor convex mirrors are stocked. 18" and 36" sizes are available by special order
- Glass beads applied atop wet traffic paint will reflectorize the markings for better nighttime visibility.
